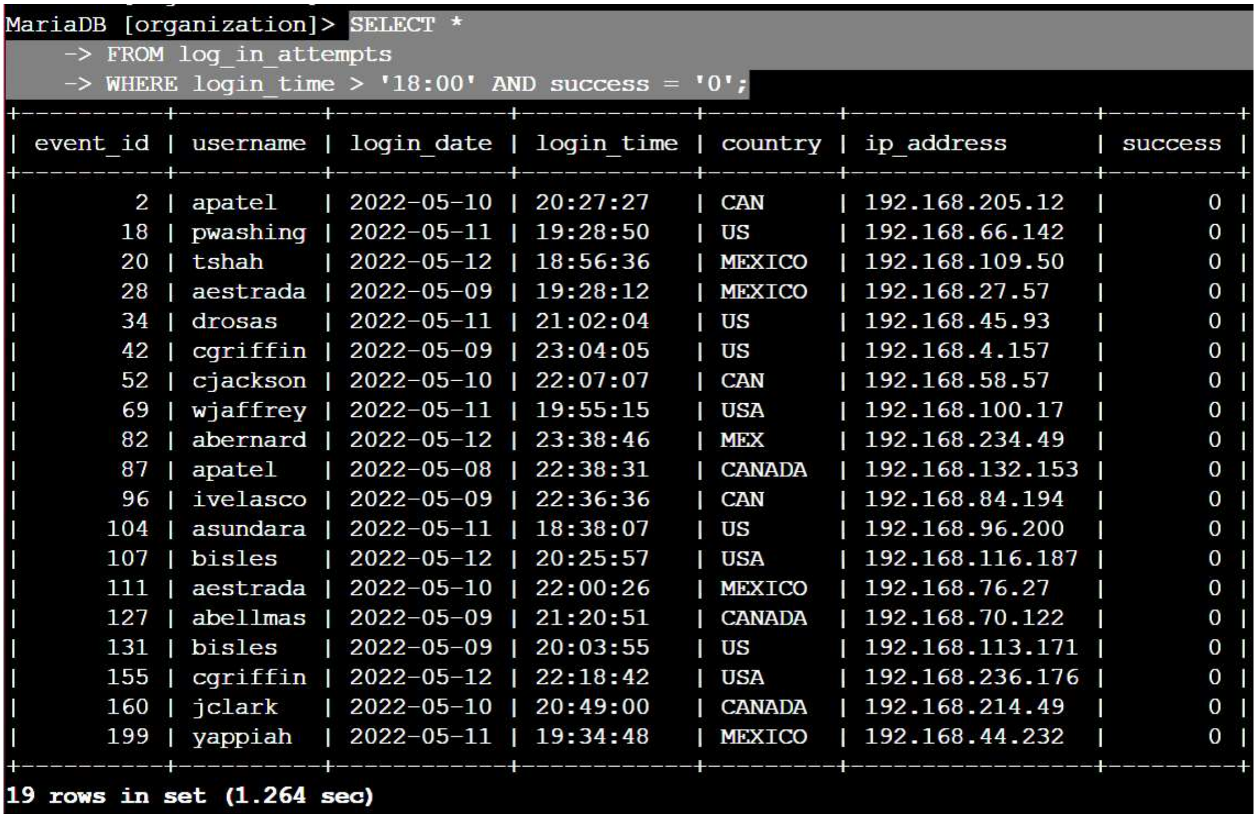
Apply filters to SQL queries

Project description

As a security professional that is a part of a large organization, my current task is to examine potential security issues that may involve login attempts and employee machines. I am to utilize SQL to retrieve organizational data within its “employees” and “log_in_attempts” tables and utilize SQL filters such as AND, OR, LIKE, and NOT to sort through the data.

Retrieve after hours failed login attempts



```
MariaDB [organization]> SELECT *
    -> FROM log_in_attempts
    -> WHERE login_time > '18:00' AND success = '0';
+----------+----------+------------+------------+---------+-----------------+---------+
| event_id | username | login_date | login_time | country | ip_address      | success |
+----------+----------+------------+------------+---------+-----------------+---------+

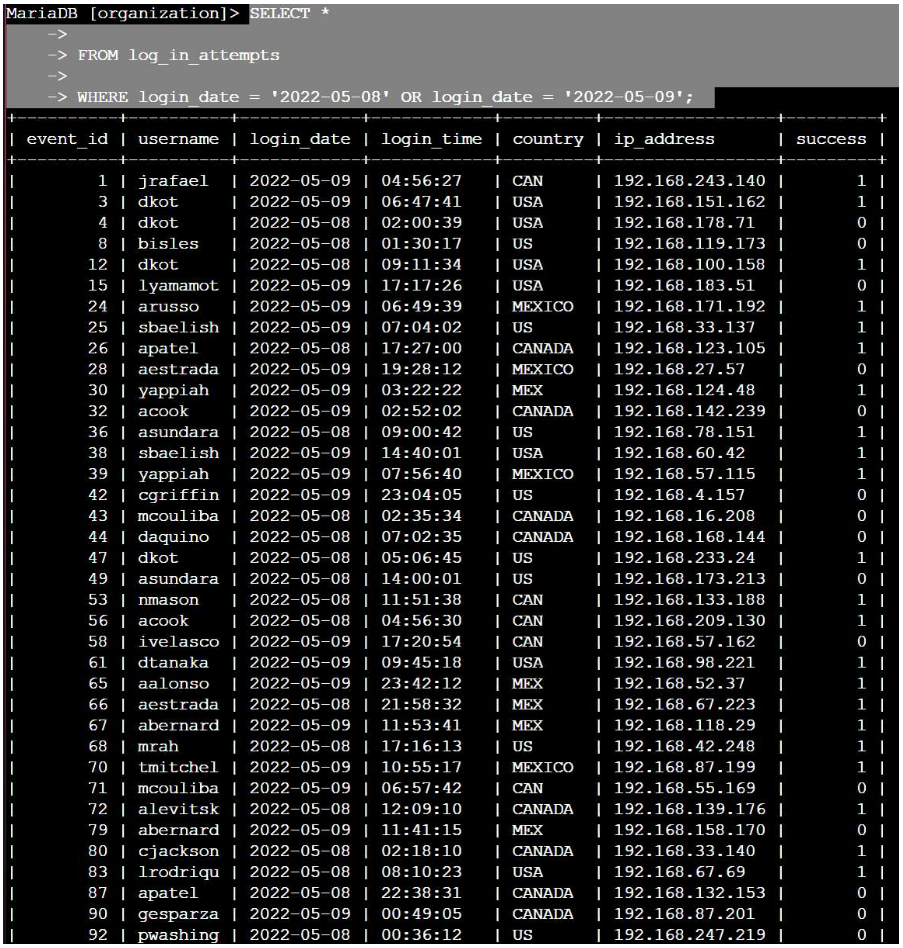
+----------+----------+------------+------------+---------+-----------------+---------+
19 rows in set (1.264 sec)
```

My query selects all columns within the “log_in_attempts” table to filter by finding all login attempts that occurred after hours (after 6pm) that failed utilizing the AND operator to satisfy both conditions. “SELECT *” allows all columns to appear in the query. “FROM log_in_attempts” specifies the table to search. “Where login_time > ‘18:00’ AND success = ‘0’” searches all records of failed login attempts after 18:00. AND is used to find entries that satisfy multiple conditions and exclude those that do not.

Retrieve login attempts on specific dates



```
MariaDB [organization]> SELECT *
    ->
    -> FROM log_in_attempts
    ->
    -> WHERE login_date = '2022-05-08' OR login_date = '2022-05-09';
+----------+----------+------------+------------+---------+-----------------+---------+
| event_id | username | login_date | login_time | country | ip_address      | success |

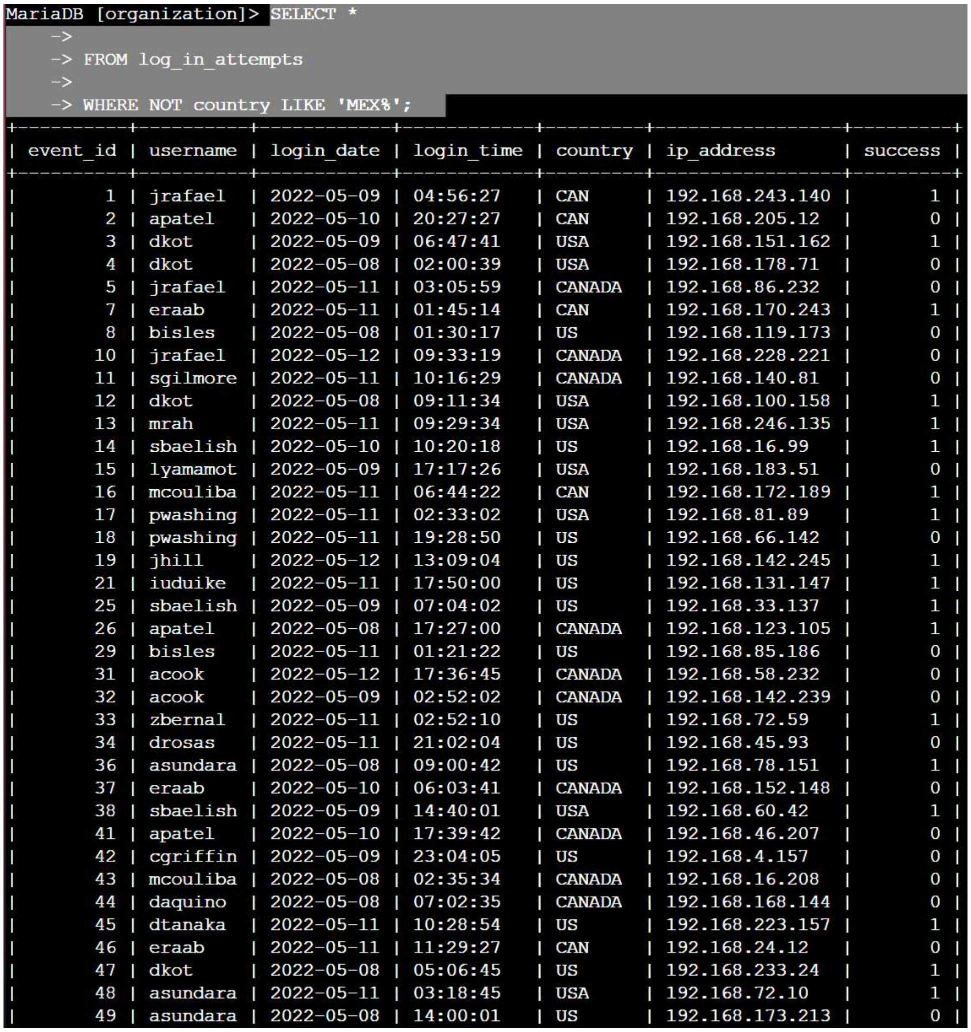
```

This query utilizes the OR operator to find suspicious login attempt activity occurring either on 2022-05-08 or 2022-05-09. "SELECT *" allows all columns to appear in the query. "FROM log_in_attempts" specifies the table to search. "WHERE login_date = '2022-05-08' OR login_date = '2022-05-09'" filters the login_date column for records that satisfy login attempts made on either of those dates. OR is used to find entries that satisfy either condition that is presented or both.

Retrieve login attempts outside of Mexico



```
MariaDB [organization]> SELECT *
    ->
    -> FROM log_in_attempts
    ->
    -> WHERE NOT country LIKE 'MEX%';
+----------+----------+------------+------------+---------+-----------------+---------+
| event_id | username | login_date | login_time | country | ip_address      | success |

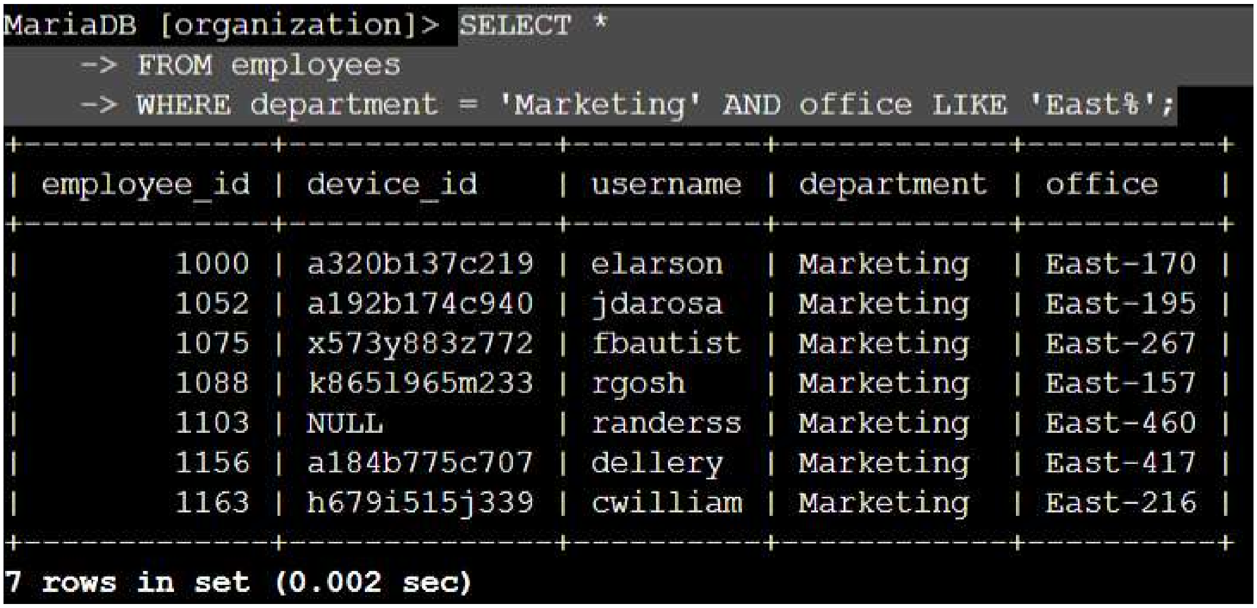
```

"SELECT *" allows all columns to appear in the query. "FROM log_in_attempts" specifies the table to search. "WHERE NOT country LIKE 'MEX%'" tells the query to list all records with countries that are not MEX or any country that has characters including MEX in its beginning. LIKE is used when filtering for any combination of a string of characters. In this case, there are entries where countries are entered "MEX" and "MEXICO".

Retrieve employees in Marketing



```
MariaDB [organization]> SELECT *
    -> FROM employees
    -> WHERE department = 'Marketing' AND office LIKE 'East%';
+-------------+---------------+----------+------------+----------+
| employee_id | device_id     | username | department | office   |

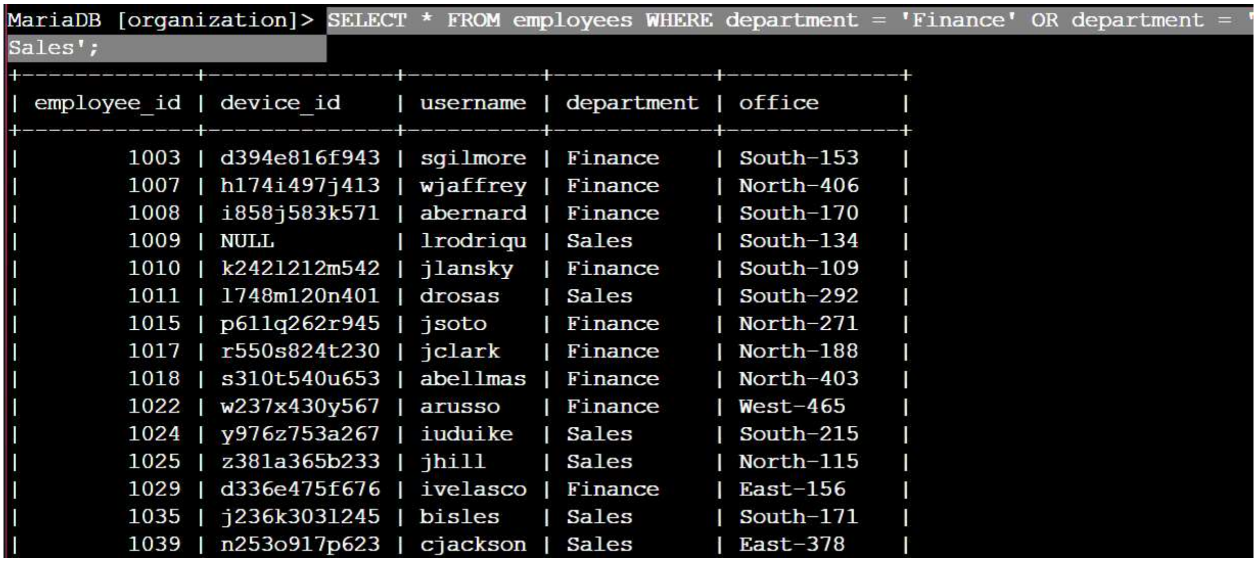
7 rows in set (0.002 sec)
```

"SELECT *" allows all columns to appear in the query. "FROM employees" specifies the query to search the employees table. "WHERE department = 'Marketing' AND office LIKE 'East%'" specifies the query to search all records where an employee is both in the Marketing department and is in any office in the East building.

Retrieve employees in Finance or Sales



```
MariaDB [organization]> SELECT * FROM employees WHERE department = 'Finance' OR department = '
Sales';
+-------------+---------------+-----------+------------+-------------+
| employee_id | device_id     | username  | department | office      |

```

"SELECT *" allows all columns to appear in the query. "FROM employees" specifies the query to search the employees table. "WHERE NOT department = "Information Technology"" Specifies the query to search for all employees that are not in the Information Technology department. NOT is used to find entries that are everything except what is specified.

Summary

In this scenario I was tasked with filtering data for suspicious activity within the organization and updating systems. I sorted through failed login attempts after work hours for suspicious activity, filtered through login attempts made on specific dates, investigated login attempts made outside of Mexico, and checked for employee devices that may need updates.
